

EcoPrint Enterprise Release Announced

We would like to take this opportunity to tell you about some exciting news! Due to the success of our initial release of EcoPrint we have now developed a new 'enterprise class' version of our software, which is currently in Beta testing.

EcoPrint Enterprise has many new features, all of which have been designed to save you toner and money. We have also made it much easier to implement and manage these savings. With the inclusion of the EcoPrint Reporting Console you can now generate savings and usage statistics on a per user and per group basis. So you can actually see where your toner is being used and exactly how much you are saving.

EcoPrint Enterprise has been designed to work seamlessly with existing infrastructures and employs the latest technologies ensuring the best possible toner reduction and cost savings.

One of the new features of **EcoPrint Enterprise** is the ability to create fully customisable policies so that an Administrator can set different toner usage rules on a per user and per group basis, with savings of up to **60%** achievable!

EcoPrint Enterprise is centrally managed from the EcoPrint Administration Console and also includes innovative software to allow monochrome (black & white) only printing, which stops the use of expensive colour toners, and also the ability to force duplex printing. These, and other features, not only save huge amounts of money by using less toner and paper but also reduce the carbon footprint, having a positive impact on the environment.

EcoPrint Enterprise has a release date of Quarter 1, 2012. Please register your interest now to be among the first to receive a free trial of this exciting new software.

Please register on our website.

Regards,

EcoPrint Management Team
